

Climate-Safe Housing Growth Areas MVP Screening

What This Is

This is the same-day MVP for the Maine climate-safe housing research project. It ranks Maine towns using statewide ACS housing, vulnerability, commute, digital-access, and seasonal-housing indicators already loaded in PostGIS.

It does not yet claim that any parcel is climate-safe. FEMA flood zones, Maine Geological Survey sea-level-rise/storm-surge scenarios, wetlands, conserved land, slope, roads, bridges, culverts, parcels, and zoning still need to be spatially overlaid before parcel-level recommendations are made.

What It Answers Today

- Maine populated towns/county subdivisions screened: 518.
- Highest MVP climate-safe housing search priority: Portland, Cumberland County.
- Highest resilience investment priority: Bancroft UT, Aroostook County.
- Highest housing pressure signal: Allagash, Aroostook County.
- Strongest infrastructure-efficiency proxy: Portland, Cumberland County.

MVP Scoring Logic

Score	Inputs	Purpose
Housing need	cost burden, renter burden, poverty, seasonal housing, zero-car households, population scale	Find towns where housing production or year-round affordability pressure is high.
Social vulnerability	poverty, older adults, disability, zero-car households, digital gap, cost burden	Find towns where climate disruption and housing instability could hurt people most.
Infrastructure-efficiency proxy	population scale, commute efficiency, digital capacity, work-from-home, income, year-round housing capacity	Identify towns that may support efficient growth before detailed road/utility overlays.
Resilience investment priority	social vulnerability, housing need, long commutes, digital gap, seasonal pressure	Find places where public investment should come before or alongside housing growth.
MVP climate-safe housing search priority	housing need, infrastructure proxy, vulnerability, population scale, year-round capacity	Rank where to run the next parcel-level FEMA/MGS/wetlands/roads overlay first.

Focus Towns

Town	County	MVP Score	Housing Need	Resilience Priority	Infrastructure Proxy	Lane
Brunswick	Cumberland	52.85	54.89	31.91	57.28	monitor and screen after hazard-layer ingestion
Cumberland	Cumberland	44.1	43.07	23.93	57.86	monitor and screen after hazard-layer ingestion
Falmouth	Cumberland	44.17	38.01	22.21	62.02	monitor and screen after hazard-layer ingestion
Gorham	Cumberland	45.45	39.38	23.73	57.79	monitor and screen after hazard-layer ingestion
Hollis	York	40.88	45.91	29.18	45.39	monitor and screen after hazard-layer ingestion
Kennebunk	York	44.66	47.09	32.02	55.99	monitor and screen after hazard-layer ingestion
Portland	Cumberland	73.04	67.34	35.78	84.36	infrastructure-efficient affordable housing search
Scarborough	Cumberland	50.86	50.58	26.64	65.24	infrastructure-efficient affordable housing search
South Portland	Cumberland	56.66	56.97	28.21	65.01	infrastructure-efficient affordable housing search

Town	County	MVP Score	Housing Need	Resilience Priority	Infrastructure Proxy	Lane
Westbrook	Cumberland	52.09	51.15	25.84	61.29	infrastructure-efficient affordable housing search

Next Spatial Layers To Ingest

Priority	Layer	Why It Matters
1	FEMA NFHL flood zones	Turns town screening into real flood-exposure screening.
2	Maine Geological Survey SLR/storm-surge scenarios	Identifies coastal land that may be unsuitable under future sea-level and storm scenarios.
3	USFWS NWI wetlands and Maine conservation lands	Creates hard environmental exclusions.
4	USGS 3DEP DEM slope/elevation	Adds low-lying land, slope, and terrain buildability constraints.
5	MaineDOT roads, bridges, and culverts	Adds infrastructure access and vulnerability.
6	Parcels and zoning for pilot towns	Converts statewide screening into local site-selection products.

Source Context

- U.S. Census Bureau ACS 2024 5-year table-based Summary File, loaded in `acs\_town\_demographics`.
- The project schema now includes empty PostGIS tables for hazard zones, environmental constraints, infrastructure assets, and candidate units.
- Hazard overlay status for this MVP: pending FEMA NFHL, MGS SLR/storm-surge, NWI wetlands, conservation, DEM, roads/bridges/culverts overlay.
